

Motorized Micromanipulator MM-500

Electric micromanipulators are mostly used to manipulate recording electrodes and stimulate the movement of electrodes in electrophysiological experiments.

The MM-500 was designed to meet a wide variety needs for the scientific community, and is suitable for patch clamp experiments, microinjection, extracellular recording, intra-cellular recording and precision robotic positioning applications.

Features

- Small and light size, humanized bilingual operation interface, flexible program debugging
- The TFT screen shows the position and moving speed of the activated manipulator as well as X, Y and Z
- High-resolution stepper motor meets four-axis drive, the maximum distance of X, Y, Z and diagonal movement is 25mm, with good stability and small drift
- A rotary photoelectric encoder can control two manipulators and switch freely. Origin function can meet the requirement of rapid return of electrode to original position and high repeatable positioning accuracy
- Compatible with mainstream micromanipulation platform, can be used with any microscope, can hold a variety of probes and microsyringes
